

CHEMWORLD | VISUAL DEVELOPMENT

Concept atlas

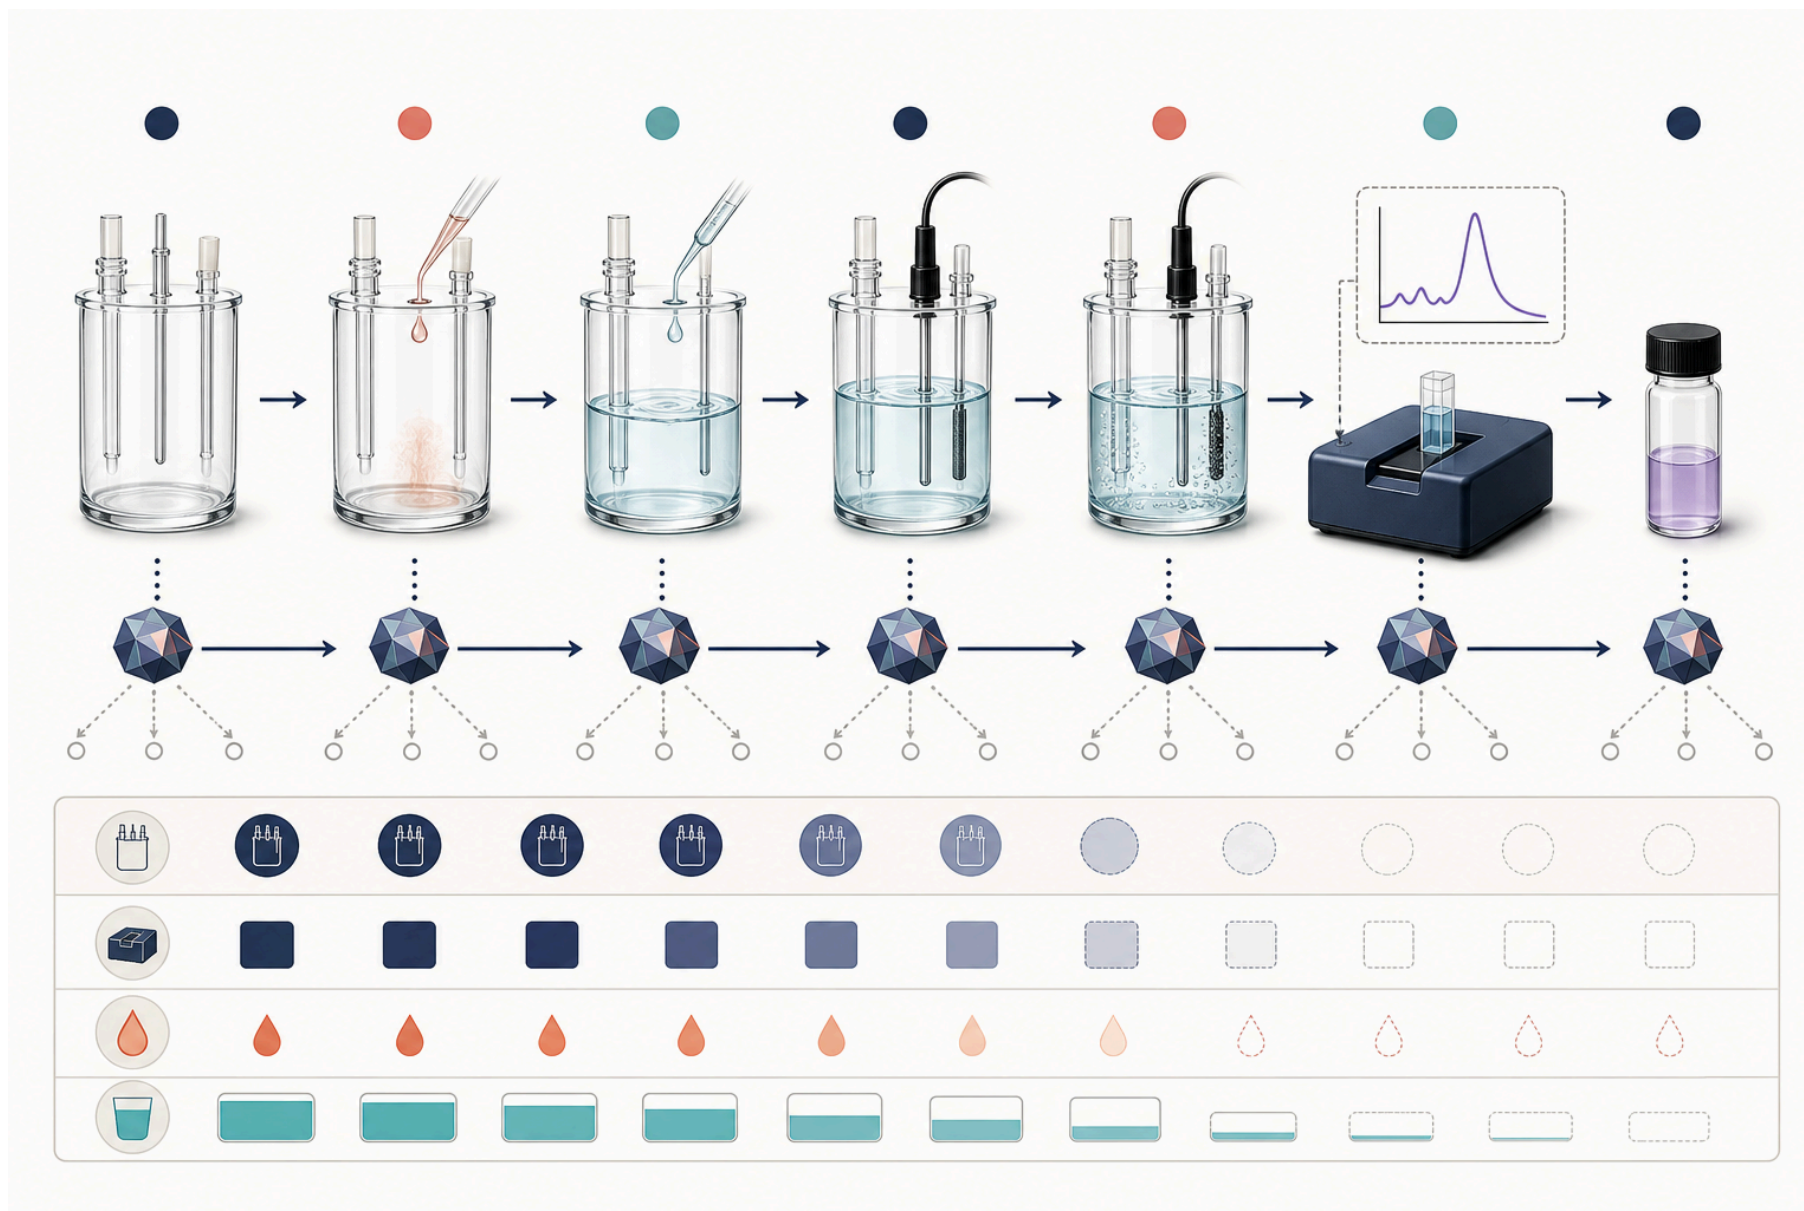

Six GPT Image 2 concept plates corresponding to the manuscript display items. These images establish composition and visual language only. The publication proof uses separately generated, data-bound SVG figures for every scientific result.

Exact prompts and editorial caveats are recorded in `concept-placeholders/README.md`.

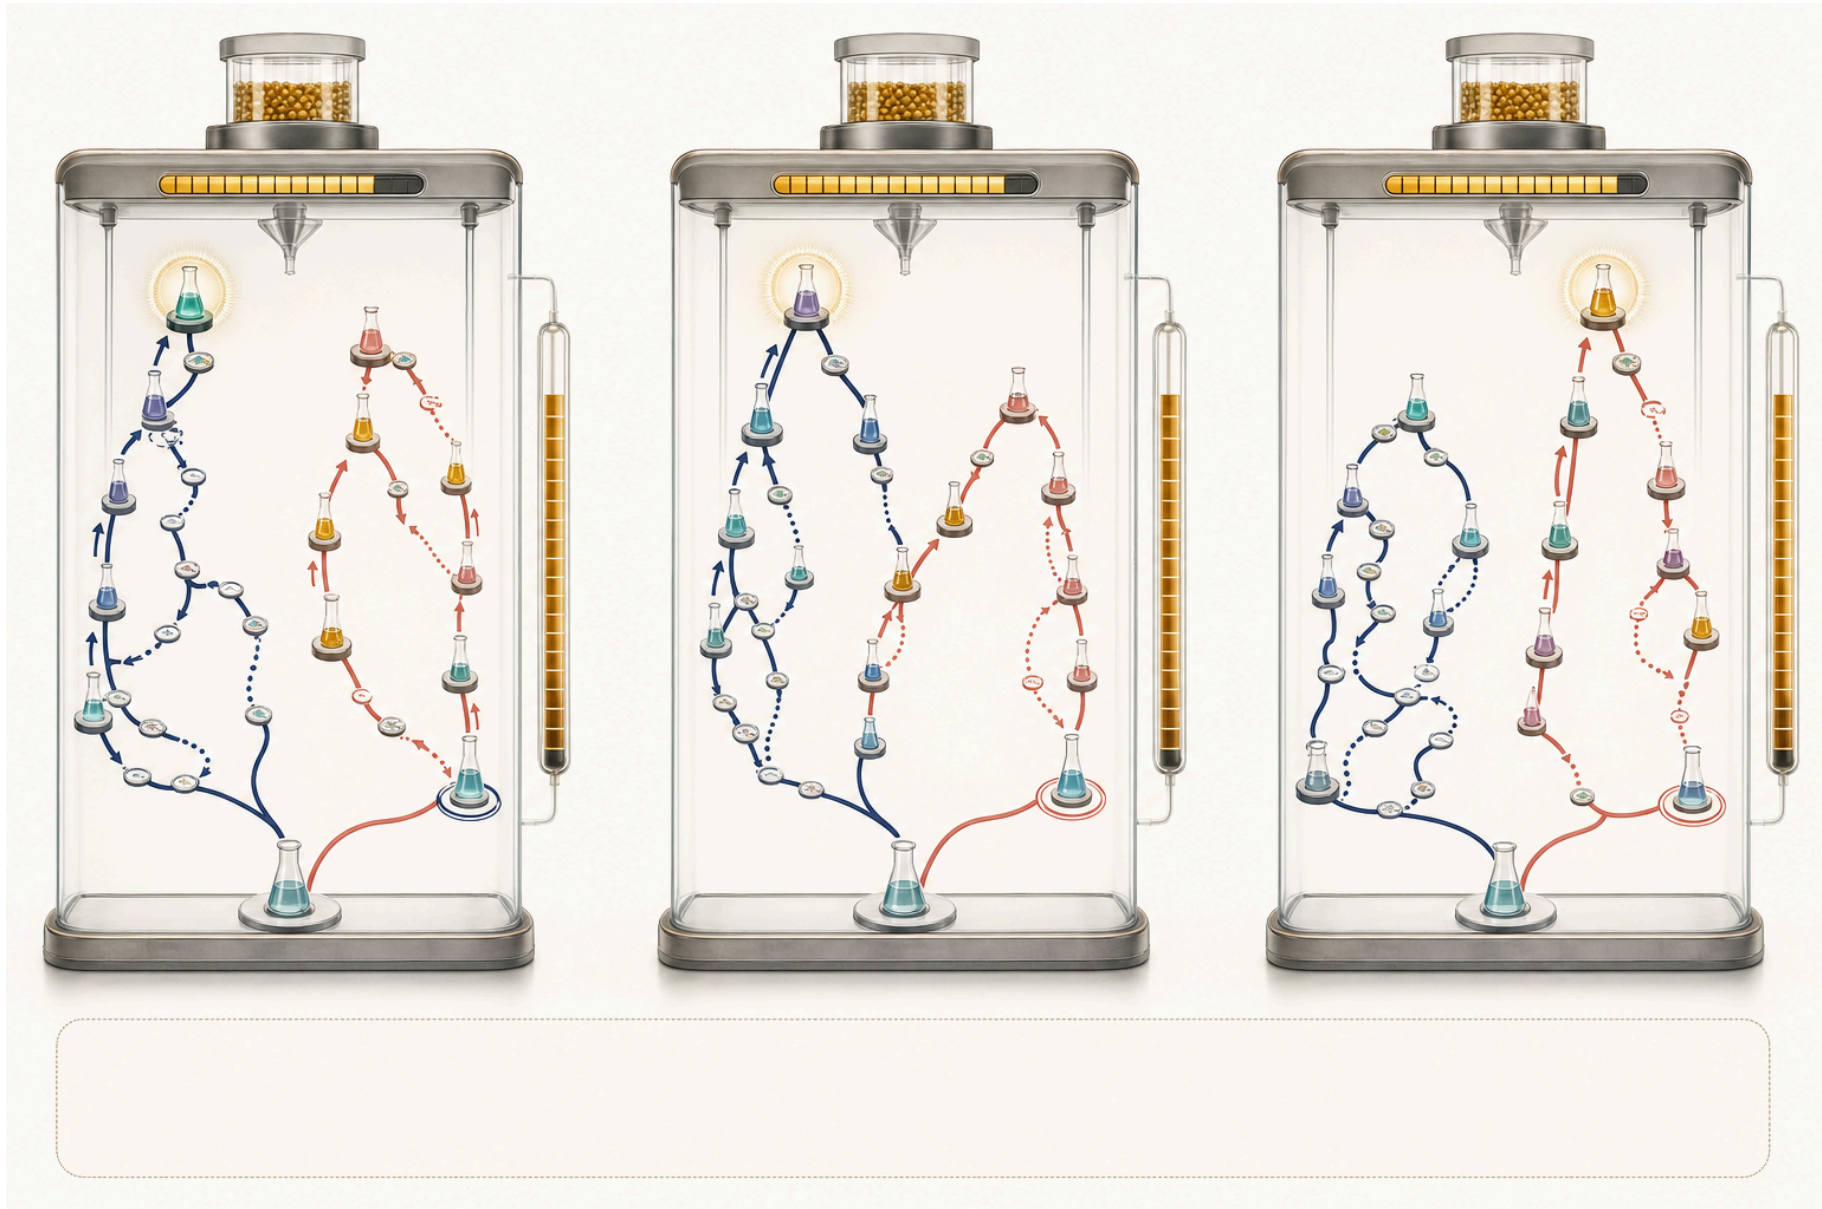

Concept 1 | ChemWorld is a controlled apparatus for experimental intelligence

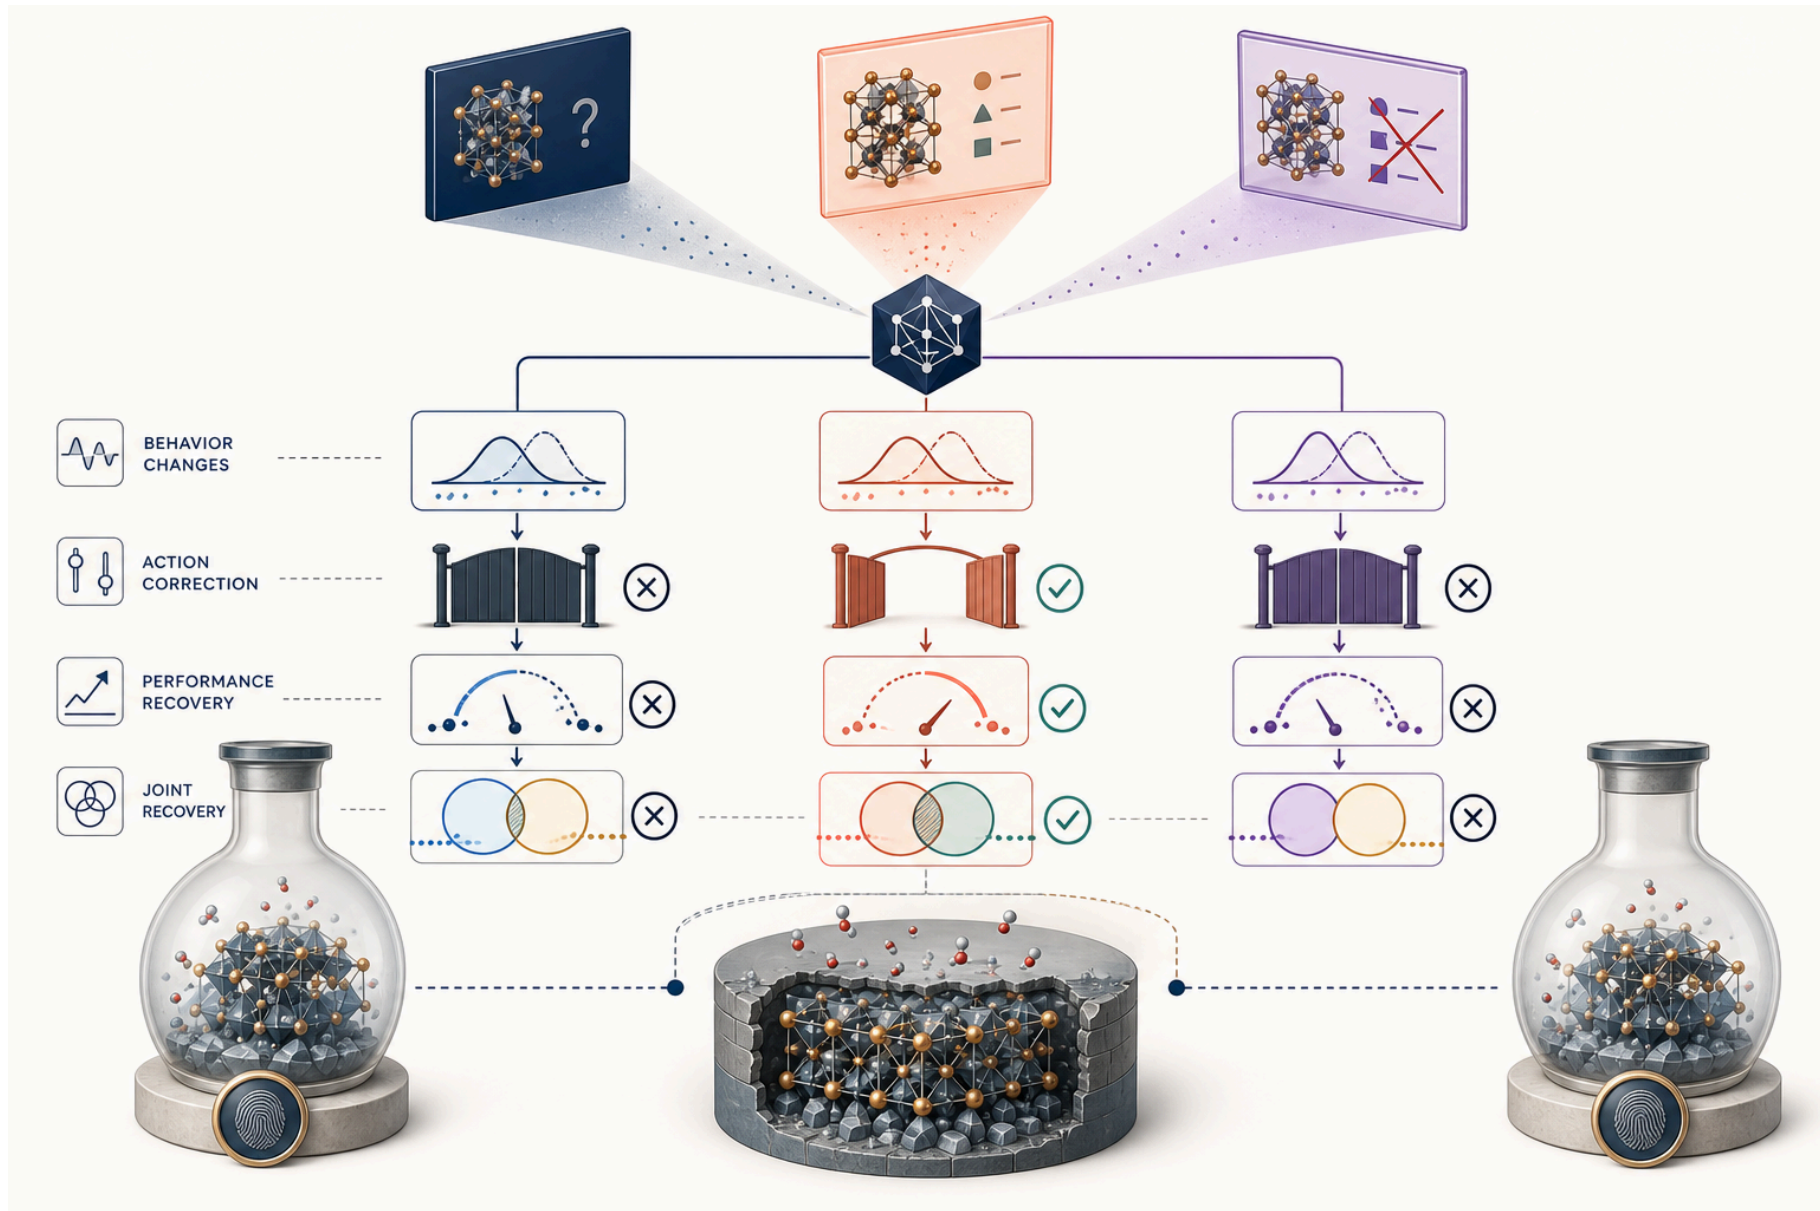

Concept 2 | One complete agent-directed experiment and its campaign ledger

Concept 3 | Endpoint summaries conceal distinct experimental trajectories

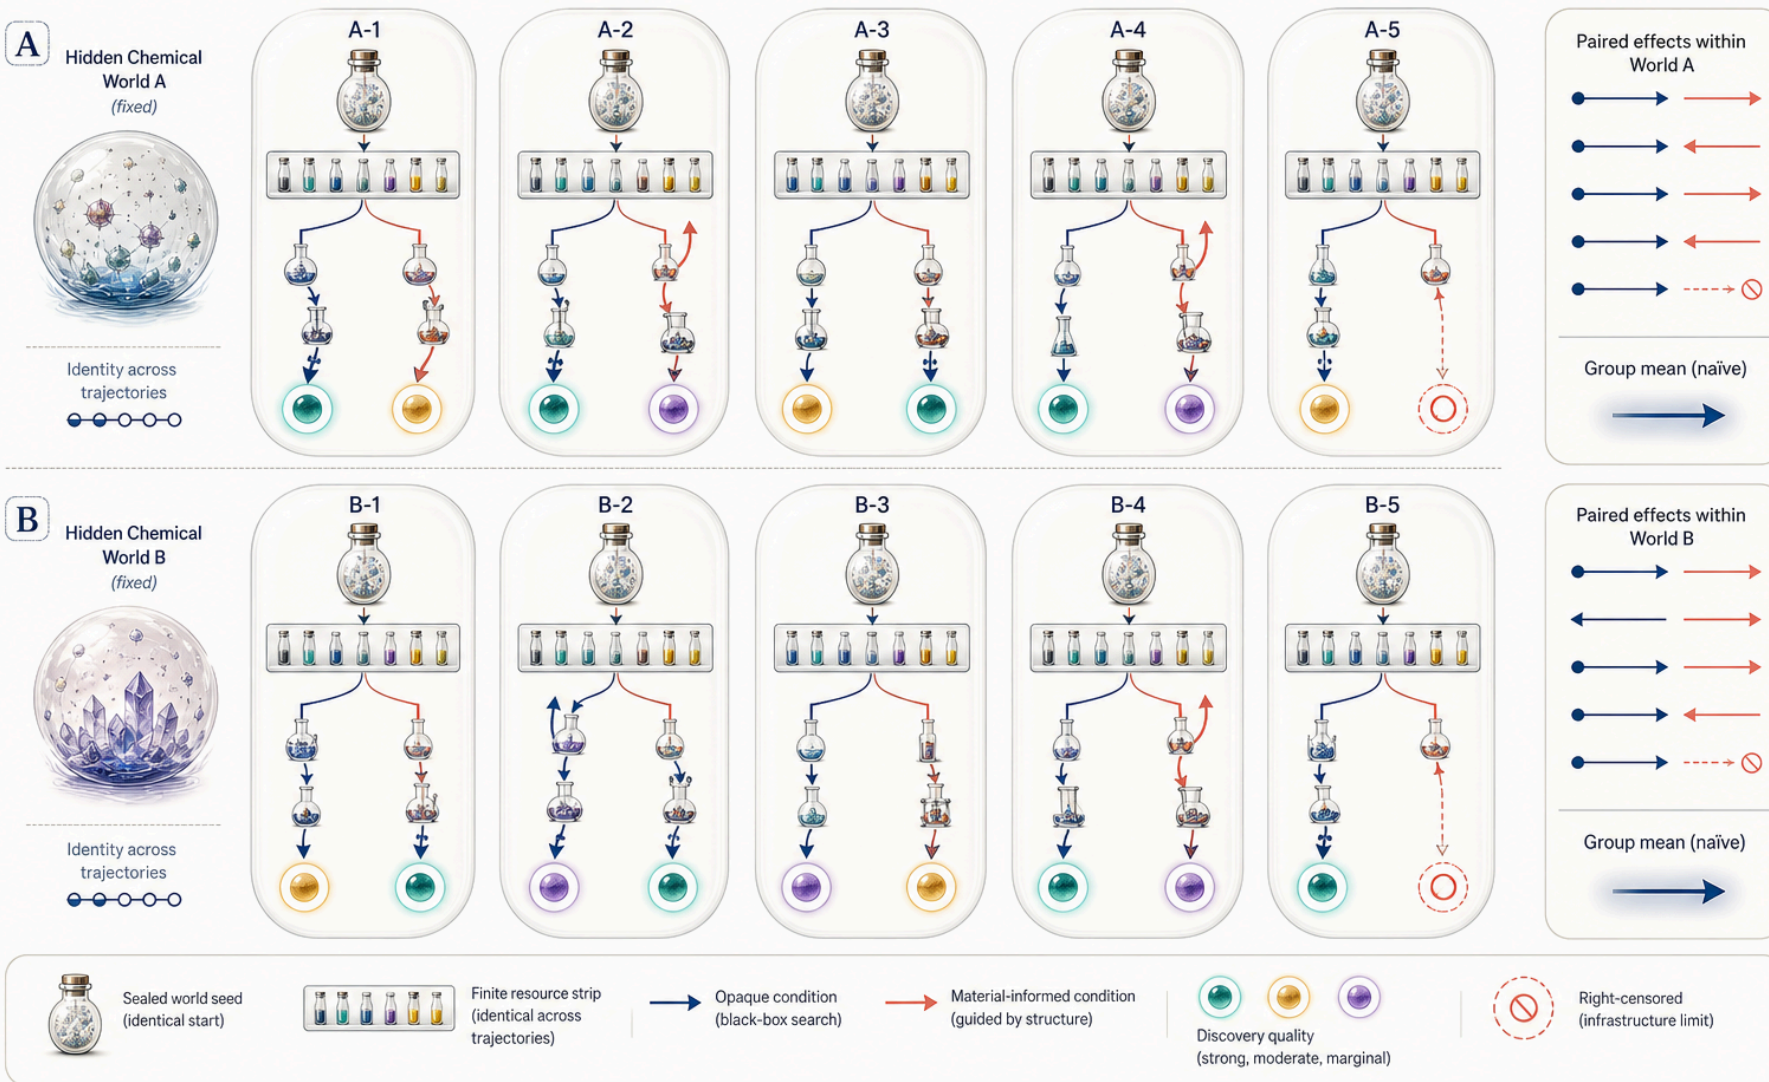

Concept 4 | Prior interventions reshape behavior without guaranteeing recovery

Concept 5 | Fresh trajectories test within-world repeatability

Figure 5. Within-World Replication of Autonomous Chemical Experimentation

Fresh trajectories within fixed hidden chemical worlds reveal heterogeneous paired effects; group means can conceal reversals.

Concept 6 | Experimental intelligence is a profile, not a scalar
