

A useful endpoint is not sufficient evidence of law discovery

a Intervene on the initial model, not the world

Target layer: entity · structure · parameter · observation

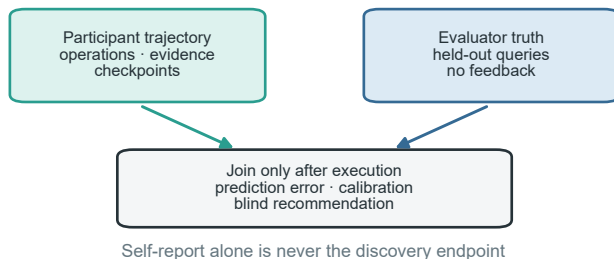

b One session controls a complete campaign

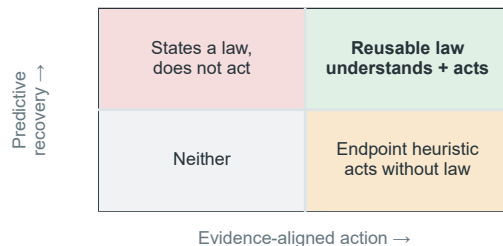

Four complete experiments; checkpoints after 0, 1, 2 and 4

c Score understanding after the campaign

d Classify what the agent actually achieved

The agent-facing initial model is manipulated under one fixed world; prediction, executable law, action and transfer remain separate evidence channels.
