

Evidence, learned laws and evaluator rankings diverge from action

● DeepSeek high ◆ Codex medium ★ Top-1 selected

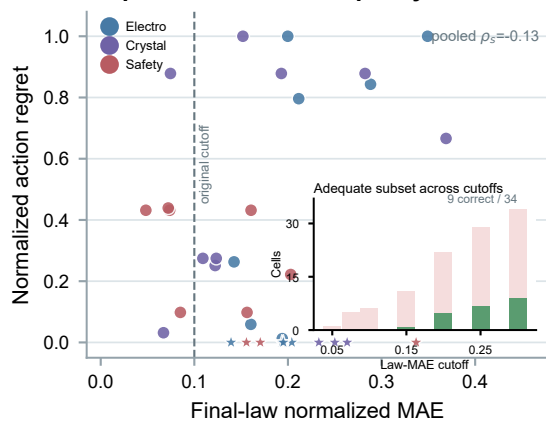

a Four action conditions expose model-specific portability failures

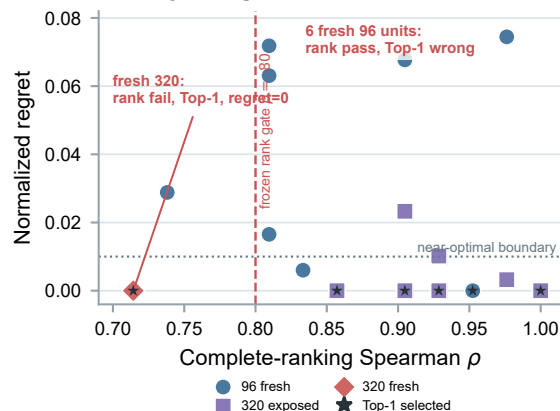

c Autonomous exploration has directional value; learned laws do not transfer reliably

b Law error has no stable monotonic map to unseen-action quality

d Full-ranking validity and action validity disagree in both directions

W2-61: 360 scheduled condition slots; donor-eligible DeepSeek/Codex strata = 42/26 and all recipient failures remain in the failure-aware estimates. W2-50: 45 scheduled, 42 eligible and 240/240 truth/replay. W2-51/W2-52 contain zero participant sessions; W2-53 reproduces 16/16 frozen unit versions. Full-ranking correlation is a secondary diagnostic, and model differences are not provider causal effects.
