

a Twelve-batch history: fines and recovery

b Batch 8 (B8) experiment in full detail

c Key observations, questions, and next tests

Observed	Agent question	Next tested action	Outcome
B1–4: fines 99.5–100.0%	Where are fines forming?	B5: omit quench; cool before seeding	fines 30.3%; first feasible
B5: feasible; recovery 40.0%	Do colder endpoints improve recovery?	B6/B7: end at 265/250 K; B8: seed 5 → 1 mg	recovery 42.8 → 45.0 → 45.5% fines < 30%
B8 best so far; B9–10 additional probes	Does higher concentration help?	B11: S2 0.080 → 0.040 L	B11 fines 72.6%, rejected; B12 repeats B8: 26.9%
