

The same causal intervention spans three scientific loci

a Five task families form the entity / ontology backbone

b Sparse locus-specific blocks

c Evidence partitions

d Executed prospective denominators

Entity prospective	25 · 75 · 600
Parametric	10 · 30 · 300
Structural	10 · 30 · 360
Total	45 · 135 · 1,260

clusters · sessions · experiments
Evaluator counts follow the prespecified design

Executed prospective and matched-evidence blocks are foregrounded; private replication and context-reset portability remain future tests.
