

Formal multi-task open-action matrix: complete plans still do not close law-to-action transfer

● Opaque ● Aligned ● Misindexed ★ Top-1 selected

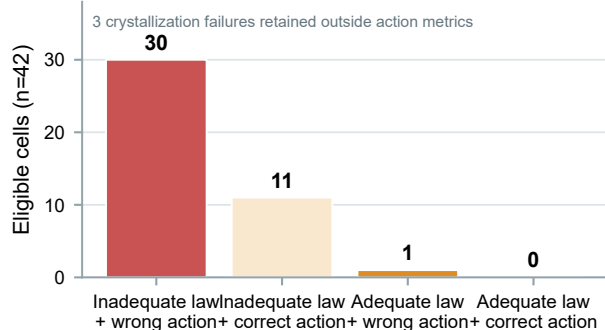

a A Unseen-plan ranking is task dependent

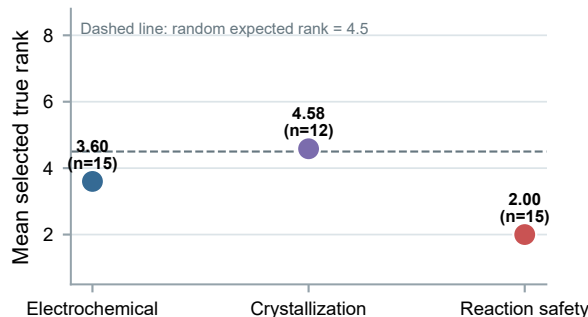

b B Regret remains large in crystallization

c C A law-adequate counterexample still produced a wrong action

d D Task means summarize heterogeneity; no pooled arm effect

45 scheduled cells across 3 tasks × 5 worlds × 3 arms; 42 eligible for action metrics; 3 crystallization failures retained. Truth and exact replay: 240/240. Each row is one task-world cluster; arm colors identify nominal alternatives and no ordered trajectory is implied. Stars mark Top-1 selection; × marks a missing terminal action readout. Means are descriptive; no arm-level inferential claim is made.
