

A useful endpoint is not sufficient evidence of law discovery

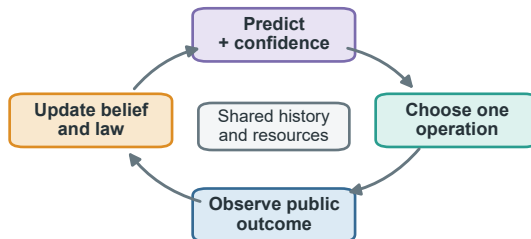

a Intervene on the initial model, not the world

Target locus: entity · structure · dynamics · observation · scope

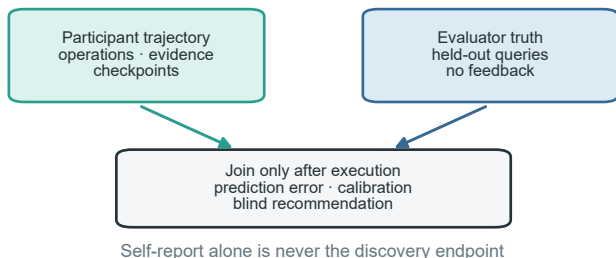

One prespecified component of M0 changes; W and the public contract stay fixed

b One session controls a complete campaign

Intervention-specific campaign: entity 8 · parametric 10 · structural 12 experiments

c Score understanding after the campaign

The agent-facing initial model is manipulated under one fixed world; prediction, executable law, action and transfer remain separate evidence channels.

d Classify what the agent actually achieved

Predictive recovery →	States a law, does not act	Reusable law understands + acts
	Neither	Endpoint heuristic acts without law
Evidence-aligned action →
