

Held-out evaluation separates prediction repair from reusable law recovery

● Electrochemical ● Crystallization ● Distillation ● Partition ● Safety constrained

a Misindexed correction does not exceed aligned-prior improvement

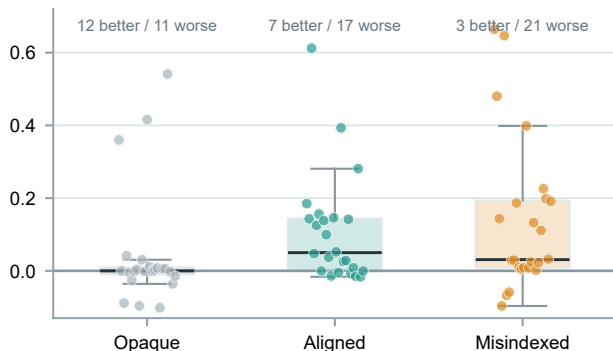

b Only safety has a positive task-level mean C_{prior}

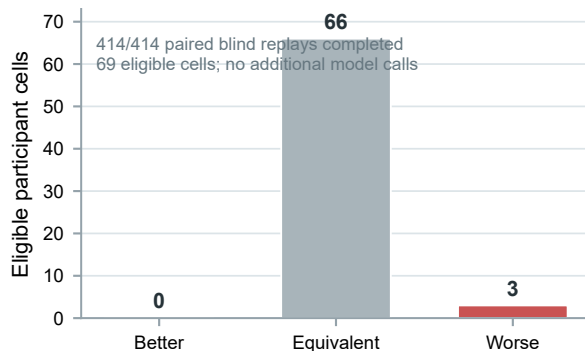

c Executable law compression is often worse than final predictions

Law-summary error - final-prediction error

d Recommendations do not beat the observed incumbent

DeepSeek exploratory evidence: 25 task × world clusters, 75 retained cells, 100/100 evaluator-truth queries and 414/414 blind replays. Open points mark clusters with a retained failed arm; prespecified missing-outcome rules are retained. No confirmatory test, private transfer claim or cross-provider ranking is performed.
