

Held-out evaluation separates prediction repair from reusable law recovery

● Electrochemical ● Crystallization ● Distillation ● Partition ● Safety constrained

a Misindexed correction does not exceed aligned-prior improvement

b Only safety has a positive task-level mean H3

c Executable law compression is often worse than final predictions

d Recommendations do not beat the observed incumbent

DeepSeek development-only evidence: 25 task x seed clusters, 75 retained cells, 100/100 evaluator-truth queries and 414/414 blind replays. Open points mark clusters with a retained failed arm; frozen missing-outcome rules remain in H3. No formal test, private transfer claim or cross-provider ranking is performed.
