

Programmable world

Composable process laws
Persistent material and samples
Instruments and resource costs
Evaluator-owned private laws

Autonomous research

Opaque / Aligned / MisIndexed
Task-specific goals and budgets
Agent selects each operation
Observations inform new choices

Sealed assessment

Seal operating recommendation
K1: free-form mechanism
Q: predict 12 new conditions
K2: reflect on the evidence

Full action-observation history is retained; Q uses the original agent context

Two distinct controls

Change laws under a matched interface
Or change dossiers in the same world

Separate readouts

Prediction error, intervals, and task retests
Link claims to observed experiments
